Asphalt de-barrelling equipment is a device used to recover asphalt from asphalt barrels, mainly used in asphalt production, transportation and storage. Its working principle is to separate asphalt from the barrel by heating and pressure, reducing asphalt waste and improving production efficiency. This equipment usually includes a heating system, a vacuum de-barrelling device, a pump and a control system, which can effectively remove asphalt from the sealed barrel to avoid waste caused by asphalt adhering to the barrel wall.

With the continuous development of global road construction, infrastructure projects and the oil industry, the market demand for asphalt de-barrelling equipment has gradually increased. Especially in the context of increasing requirements for environmental protection and energy conservation, the technology of recycling asphalt has gradually become an important market trend. In recent years, with the continuous advancement of technology and the improvement of production processes, asphalt de-barrelling equipment has been significantly improved in energy saving and consumption reduction, ease of operation and equipment automation, and has broad market

prospects. Especially in the infrastructure construction of emerging markets and developing countries, the application of asphalt de-barrelling equipment is steadily growing.
