Asia-Pacific is the largest market, with a share about 57%, followed by Americas and Europe, with share about 23% and 16%. In terms of product type, Polymer Modifiers occupy the largest share of the total market, about 62%. And in terms of product application, the largest application is Road Paving, followed by Roofing.

Asphalt chemical additive refers to a substance that is added to asphalt mixtures to improve their performance and durability. These additives can enhance the properties of asphalt such as its adhesion, elasticity, resistance to cracking and weathering, and reduce the amount of rutting and oxidation. These additives are typically organic or inorganic materials, polymers, or chemicals dissolved in a solvent. The type and amount of chemical additives used depend on the specific application and the properties desired in the asphalt mixture.
