A Crack Sealer machine, also known as an Asphalt Crack Filler Machine, is a specifically designed equipment used for sealing cracks or joints in asphalt pavements. These cracks are usually caused by weather changes, traffic loads, and aging of the pavement. A Crack Sealer machine typically consists of a heating system that warms up the sealant, a hose pipe, and nozzle to apply the sealant onto the cracks, and a compressor to supply air pressure to clean debris from the cracks before sealing. The sealant used in these machines is usually hot-pour rubberized asphalt, which has excellent adhesion properties and durability.
