Asphalt shingles are a type of waterproof roofing material that uses asphalt as the primary waterproofing. A cool roof is a roofing system that delivers higher solar reflectance (the ability to reflect the visible, infrared and ultraviolet wavelengths of the sun, reducing heat transfer to the building) and higher thermal emittance (the ability to radiate absorbed, or non-reflected solar energy) than standard designed roofing products. Historically, cool roofs have been either white or some other lighter shade color. However, that dynamic has changed in recent years with the development of residential cool roof products can also offer solar reflectivity even in dark, rich hues.

Asphalt shingles are a type of waterproof roofing material that uses asphalt as the primary waterproofing material. They are the most popular roofing material in the United States because they are inexpensive, durable, and come in various colors and styles. Asphalt shingles in cool roofs are specially designed with solar-reflecting granules (granules that reflect the sun's rays) to help decrease the amount of heat transferred into a home. These shingles can help make your home more comfortable and environmental.
