Abstracts

The global Asphalt Synchronous Chip Sealer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Asphalt Synchronous Chip Sealer refers to the use of synchronous lithotripsy sealing car to spray asphalt binder and aggregate at the same time, so that the asphalt binder and aggregate have the most full contact, in order to achieve the maximum degree of bonding between them. Compared with ordinary crushed stone sealing, synchronous crushed stone sealing reduces the time interval between spraying binder and spreading aggregate, so that aggregate particles can be better implanted in the binder to obtain more coating area. It is easier to ensure a stable proportional relationship between binder and stone chips, improve operation productivity, reduce mechanical configuration, reduce construction costs.
