Abstracts

The global Aspheric Posterior Chamber Intraocular Lens market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Posterior chamber intraocular lens, also known as implantable contact lens (ICL), provides a new way for the treatment of refractive errors other than corneal surgery, and can be applied to patients with high myopia, anisometropia, and keratoconus. On the basis of spherical intraocular lenses, aspheric intraocular lenses force light rays that cannot be focused on one point by spherical lenses to focus on the same point through small changes in surface shape. Aspheric surfaces can be used to compensate for visual problems caused by spherical aberration of the eye.

This report studies the global Aspheric Posterior Chamber Intraocular Lens production, demand, key manufacturers, and key regions.
