Abstracts

The global Aspherical Molded Glass Lens market size is expected to reach \$ 1939 million by 2032, rising at a market growth of 3.3% CAGR during the forecast period (2026-2032).

Aspherical Molded Glass Lens refer to lenses made of optical glass as the substrate, which are softened by precision heating and then pressed into a high-precision mold to obtain a non spherical surface shape. After annealing and coating processes, aberration correction and miniaturization of imaging modules can be achieved with fewer pieces. The core advantages are good consistency in mass production, strong environmental stability, and the ability to maintain surface shape and refractive performance under high temperature and high reliability conditions. In 2025, global Aspherical Molded Glass Lens production reached approximately 84 M Pcs, with an average global market price of around US\$ 17.06 per Pcs.

The downstream demand for non spherical glass molded lenses is mainly driven by the miniaturization of multiple cameras in mobile phones and consumer electronics, the increasing requirements for temperature drift and reliability in car cameras and LiDAR, as well as the high-resolution trend in medical and industrial imaging. The competition focus on the supply side is more concentrated on the window capability of molds and molding processes, yield and surface defect control, adaptation of high refractive index and low dispersion glass materials, and coating and modular delivery capabilities. The industry as a whole presents a parallel pattern of large-scale cost reduction and high-end specifications.
