Abstracts

The aspherical precision molding machine can mass-produce precision aspherical glass lenses. The aspherical molding machine uses optical glass precision molding technology. This technology is a high-efficiency, green and environmentally friendly high-precision optical element manufacturing technology. It puts softened glass into a high-precision mold and heats and pressurizes it. Under oxygen-free conditions, optical components that meet the usage requirements can be produced directly through one-time molding. This report mainly focuses on aspheric precision molding machines in the Consumer Electronics field.

According to our (Global Info Research) latest study, the global Aspherical Precision Molding Machine for Consumer Electronics market size was valued at US\$ 12.3 million in 2023 and is forecast to a readjusted size of USD 37.4 million by 2030 with a CAGR of 9.6% during review period.

Aspheric glass lenses have high advantages in terms of light transmittance, refractive index, temperature range, distortion rate, wear resistance, chromatic aberration, imaging effect and stability. With the rapid development of the global automotive industry, aspheric glass lenses can more accurately match the high-quality requirements of on-board cameras under the intelligent trend. Optical components, as an important entrance for information collection at the perception layer such as vehicle lenses and lidar, will benefit from the development of the smart driving market. As the aspheric glass lens market continues to expand, as an important production equipment for molding aspheric glass lenses, aspheric precision molding machines will also benefit and have broad room for development.
