## Abstracts

According to our (Global Info Research) latest study, the global Assembling a Fixed Moment System market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The assembly torque system is a system used to ensure that parts are tightened correctly and evenly during the assembly process. It controls the torque size of fasteners such as bolts and nuts during assembly through a preset torque value, so as to achieve a predetermined tightening effect. The assembly torque system can accurately control the torque applied to the fasteners to ensure uniformity and consistency of tightening force. Through precise torque control, assembly quality problems caused by over-tightening or over-loosening can be avoided, and the overall performance and reliability of the product can be improved. The assembly torque system can adapt to different types of fasteners and assembly requirements and has a wide range of applicability.

Assembly torque systems are widely used in aerospace, automobile manufacturing, industrial machinery, pharmaceutical manufacturing and other industries. In particular, assembly torque systems play an important role in industrial automation control, mechanical operation monitoring, aerospace, automobile parts and other fields. As the manufacturing industry develops towards high-end and intelligent directions, the performance requirements for assembly torque systems are getting higher and higher. At the same time, with the rapid development of new energy vehicles, intelligent manufacturing and other fields, the demand for assembly torque systems is also increasing. The cooperation between upstream and downstream enterprises in the assembly torque system industry chain is getting closer and closer. Upstream

enterprises actively improve the quality and technical level of raw materials to provide downstream enterprises with better products and services. Downstream enterprises achieve product upgrades and market expansion through close cooperation with upstream enterprises. The market for assembly torque systems shows a steady growth trend. With the continuous innovation of technology and changes in market demand, market competition will become more intense.
