Abstracts

Assisted Reproductive Technology (ART) is the technology used to achieve pregnancy in procedures such as fertility medication, in vitro fertilization and surrogacy. It is reproductive technology used primarily for infertility treatments, and is also known as fertility treatment. It mainly belongs to the field of reproductive endocrinology and infertility, and may also include intracytoplasmic sperm injection (ICSI) and cryopreservation. Some forms of ART are also used with regard to fertile couples for genetic reasons (preimplantation genetic diagnosis). ART is also used for couples who are discordant for certain communicable diseases; for example, HIV to reduce the risk of infection when a pregnancy is desired.

According to our (Global Info Research) latest study, the global Assisted Reproductive Technology (ART) market size was valued at USD 20630 million in 2022 and is forecast to a readjusted size of USD 29870 million by 2029 with a CAGR of 5.4% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

North America is also expected to witness growth in the coming years. This is due to people awareness towards various fertility options, government support for the in-vitro fertilization and various technological and procedure up gradation. For instance, in August 2015 Ovascience's treatment named AUGMENT has been reported to have rejuvenated women's aging egg cells and provided benefits to eggs with poor quality. In February 2015, the scientist of U.S. who invented the three parent IVF procedure requested the Food and Drug Administration (FDA) to grant permission for its clinical trials as age related infertility.
