Abstracts

The global Aster Extract market size is expected to reach \$ 113 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

In 2025, the global production of aster extract is projected to be approximately 2800 tons, with an average selling price of around US\$26 per kilogram. The production capacity in 2025 is estimated at 3120 tons, with an average gross profit margin of approximately 20-30%. Aster extract refers to the extract of active ingredients from the roots and rhizomes of the Asteraceae plant, *Aster tataricus*. This extract is used in traditional Chinese medicine to treat symptoms such as excessive phlegm and asthma, acute and chronic coughs, and coughs with hemoptysis. It has the effects of moistening the lungs, regulating qi, and relieving cough and phlegm.

The upstream raw materials for aster extract mainly consist of dried roots and rhizomes of cultivated or wild *Aster tataricus* plants; its downstream applications are primarily concentrated in the pharmaceutical and health product industries, serving as an important raw material in traditional Chinese medicine formulations for cough and phlegm relief. It is also used in the development of natural active ingredients in functional foods, cosmetics, and animal health products.

The *Aster tataricus* extract market is a niche segment driven by both traditional Chinese medicine theories and modern demand for natural products. Its upstream supply chain relies entirely on the stable and standardized supply of dried roots and rhizomes of *Aster tataricus*; the authenticity of the raw materials and control of pesticide residues/heavy metals are fundamental to quality. Downstream applications are highly concentrated in cough and phlegm-relieving traditional Chinese medicine granules, finished drugs, and health products, while also penetrating emerging fields such as pet cough medicines and cosmetics (primarily for soothing and repairing effects). The current market is fragmented, and the core competition is shifting from supplying crude extracts to providing standardized, high-content active extracts. Market growth is

primarily driven by increased global acceptance of herbal medicines, growing awareness of respiratory health, and the booming pet economy. However, the industry faces challenges such as fluctuating raw material quality, insufficient standardization of extraction processes, and weak clinical data supporting end products. In the future, the core competitiveness of leading companies will lie in full quality control from GAP cultivation to GMP production, mechanistic research and clinical validation for specific indications, and compliance capabilities to meet stringent domestic and international quality standards. This is a typical 'quality-driven' rather than 'scale-driven' market. This report studies the global Aster Extract production, demand, key manufacturers, and key regions.
