Abstracts

The global Astronomical Telescope market size is expected to reach \$ 287 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

Astronomical telescope is an optical instrument used to view heavenly bodies such moon, stars, planets and distant objects. Astronomical telescope consists of two convex lenses: objective and eye piece. The objective is a convex lens of large focal length and large aperture. It usually made of two convex lenses in contact with each other to reduce the chromatic and spherical aberrations. The eye piece is also a convex lens. Its focal length is smaller than that of objective. It is also a combination of two lenses.

For the telescopes with retail price below 300 \$/unit, they are generally sold with a bracket. Brackets for this level of telescopes are generally manual operated, they are low-cost and won't have big influence on the total cost of a telescope. But for telescopes of high-end, the cost of electric bracket or mount are quite high, these brackets or mounts are generally sold as accessories.

In this report, we mainly account the cost and price of telescopes, but bracket or mount not included.

The global key producers of astronomical telescopes are Synta Technology (Celestron), JOC, Takahashi, Bosma, Vixen Co, etc. The largest producer is Synta Technology (Celestron), with about 50% market share. At the consumption level, North America has the the largest market with a share of 35%. In terms of product categories, refracting telescopes have the largest market share with 46%, followed by reflector telescopes with 40%. In terms of applications, 50% of the market share is for personal use and 35% for educational institutions.

This report studies the global Astronomical Telescope production, demand, key manufacturers, and key regions.
