According to our (Global Info Research) latest study, the global Astronomical Timer Switch market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Astronomical Timer Switch is a device that automatically controls lighting and other devices according to sunrise and sunset.

They are used for the purpose of automatically flashing lighting circuits, etc. Time switches and automatic flashers are used to turn lighting circuits on and off automatically. Time switches turn lights on and off based on time only, so settings must be changed when switching between summer and winter.

Automatic flashers turn on and off based on ambient illumination, which may cause unwanted or erroneous operation. The most important feature of Astronomical Timer Switch is that the sunrise and sunset times for each district are recorded in advance.

Simply set the installation district and time, and the lighting circuit will operate according to the time of daylight. This makes it possible to operate the system without having to change settings.
