## Abstracts

According to our (Global Info Research) latest study, the global Asynchronous AC Servo Motor market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Asynchronous AC servo motor, also called AC induction servo motor, is a servo motor that uses the principle of induction motor. The difference between it and ordinary asynchronous motors is that it has higher control accuracy and faster response speed, and can meet the requirements of the servo control system. The structure of asynchronous AC servo motor is basically the same as that of ordinary asynchronous motor, mainly composed of stator and rotor. The stator is composed of a casing, an iron core, windings, etc., and generates a rotating magnetic field; the rotor is composed of an iron core, windings, etc., and generates torque under the induction of the stator's rotating magnetic field.

This report is a detailed and comprehensive analysis for global Asynchronous AC Servo Motor market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some of the selected leaders for the year 2025, are provided.
