Abstracts

The global Asynchronous FIFOs market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An asynchronous FIFO refers to a FIFO design where data values are written to a FIFO buffer from one clockdomain and the data values are read from the same FIFO buffer from another clock domain, where the two clockdomains are asynchronous to each other.

Asynchronous FIFOs are used to safely pass data from one clock domain to another clock domain.

This report studies the global Asynchronous FIFOs production, demand, key manufacturers, and key regions.
