Abstracts

According to our (Global Info Research) latest study, the global Asynchronous Motor market size was valued at USD 11260 million in 2023 and is forecast to a readjusted size of USD 18630 million by 2030 with a CAGR of 7.5% during review period.

Asynchronous motor, also called induction motor, is an AC electric motor in which the electric current in the rotor needed to produce torque is obtained by electromagnetic induction from the magnetic field of the stator winding. Asynchronous motor therefore does not require mechanical commutation, separate-excitation or self-excitation for all or part of the energy transferred from stator to rotor. Asynchronous motor's rotor can be either wound type or squirrel-cage type.

Three-phase squirrel-cage asynchronous motors are widely used in industrial drives because they are rugged, reliable and economical. Single-phase asynchronous motors are used extensively for smaller loads, such as household appliances like fans.

The major players in global Asynchronous Motor market include TECO, Emerson, Regal-Beloit, etc., and the market concentration rate is low. North America and Europe are main markets, they occupy over 50% of the global market. Three-phase asynchronous motor is the main type, with a share about 80%. Engineering And Manufacturing Industry and Logistics Industry are main applications, which hold a share about 60%.

The Global Info Research report includes an overview of the development of the Asynchronous Motor industry chain, the market status of Chemical Industry (Single-phase asynchronous motor, Three-phase asynchronous motor), Logistics Industry
