According to our (Global Info Research) latest study, the global Asynchronous Servo Drive market size was valued at US\$ 2025 million in 2024 and is forecast to a readjusted size of USD 2965 million by 2031 with a CAGR of 5.7% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Asynchronous servo drives are a type of servo drive based on asynchronous motors, mainly used in industrial applications that require high power, large torque and dynamic performance. Compared with synchronous servo drives, asynchronous servo drives generally have higher durability, lower cost and less maintenance requirements. Although the accuracy and response speed of asynchronous servo drives may be slightly inferior to those of synchronous servo drives, they perform well under heavy loads and harsh environments. Based on variable frequency speed regulation technology, asynchronous servo drives achieve precise control of the motor through vector control or direct torque control. This control method greatly improves the dynamic response of asynchronous motors, enabling them to meet more complex servo control requirements.

This report is a detailed and comprehensive analysis for global Asynchronous Servo Drive market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
