## Abstracts

According to our (Global Info Research) latest study, the global At-home Use Light Hair Removal Device and Machines market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Light based hair removal methods come in two forms – Intense Pulsed Light (IPL) and Laser Hair Removal (LHR). Both of these methods use light energy to get rid of unwanted body hair but their results are quite different. IPL produces a broad bandwidth of light wavelengths, whereas laser produces a single band of light and is more specific to a given target than IPL, therefore laser is more effective than IPL and has fewer side effects and complications.

Most at-home devices actually use IPL, or Intense Pulsed Light, rather than the lasers used at the salons. IPL tends to be weaker and less targeted than lasers, which is more safe and suitable for those with sensitive skin or sparse hair growth.
