Abstracts

The global At-home Use Light Hair Removal Device and Machines market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In Japan market, the key players of at-home use light hair removal device and machines include Philips, Panasonic, Braun, JOVS, Silk'n, and Ya-Man, etc. The top four players occupied for 40 percent. The products can be divided into price ranges of \$100-\$200, \$200-\$400, and other prices. Depending on the needs of the end user, there are products for female consumers and male consumers.

Light based hair removal methods come in two forms – Intense Pulsed Light (IPL) and Laser Hair Removal (LHR). Both of these methods use light energy to get rid of unwanted body hair but their results are quite different. IPL produces a broad bandwidth of light wavelengths, whereas laser produces a single band of light and is more specific to a given target than IPL, therefore laser is more effective than IPL and has fewer side effects and complications. Most at-home devices actually use IPL, or Intense Pulsed Light, rather than the lasers used at the salons. IPL tends to be weaker and less targeted than lasers, which is more safe and suitable for those with sensitive skin or sparse hair growth.
