Abstracts

The global Atkinson Cycle Engine market size is expected to reach \$ 3769.9 million by 2029, rising at a market growth of 4.4% CAGR during the forecast period (2023-2029).

The Atkinson-cycle engine is a type of internal combustion engine invented by James Atkinson in 1882. A variation of this approach is used in some modern automobile engines. While originally seen exclusively in hybrid electric applications such as the earlier-generation Toyota Prius, later hybrids and some non-hybrid vehicles now feature engines with variable valve timing, which can run in the Atkinson cycle as a part-time operating regimen, giving good economy while running in Atkinson cycle, and conventional power density when running as a conventional, Otto cycle engine.

This report studies the global Atkinson Cycle Engine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Atkinson Cycle Engine, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
