According to our (Global Info Research) latest study, the global Atmospheric Alkaline Electrolyzer market size was valued at US\$ 121 million in 2024 and is forecast to a readjusted size of USD 1608 million by 2031 with a CAGR of 45.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Atmospheric alkaline electrolyzer is a technical device used to produce hydrogen by electrolyzing water. Its working principle is to use alkaline solution (usually sodium hydroxide NaOH or potassium KOH aqueous solution) as electrolyte under normal pressure to decompose water into hydrogen and oxygen through direct current. The characteristics of this type of electrolyzer are that the operating pressure is close to atmospheric pressure and the volume of gas produced during the electrolysis process is large.
