According to our (Global Info Research) latest study, the global Atmospheric Plasma Source market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

An Atmospheric Plasma Source is a device used to generate plasma at atmospheric pressure, without the need for a vacuum environment. This technology is utilized in various industrial and scientific applications, including surface treatment, material modification, cleaning, and sterilization. The plasma, a highly ionized gas containing ions, electrons, and neutral particles, is produced through electrical discharges in gases like air or argon. Atmospheric plasma sources are valued for their ability to operate under normal atmospheric conditions, making them versatile and cost-effective for treating large or complex surfaces, enhancing adhesion properties, and improving material performance in fields like electronics, automotive, and biomedical engineering.
