According to our (Global Info Research) latest study, the global Atmospheric Plasma Surface Treatment System market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

An Atmospheric Plasma Surface Treatment System is a technology used to modify the surface properties of materials to enhance their adhesion, wettability, and cleanliness without altering their bulk properties. This system generates plasma at atmospheric pressure, allowing it to be applied directly in open air without the need for a vacuum chamber. It uses high-energy plasma to activate, clean, or coat surfaces, making them more receptive to bonding with adhesives, paints, coatings, or inks. Commonly used in industries such as automotive, electronics, packaging, and textiles, this treatment is efficient, environmentally friendly, and versatile for various materials like plastics, metals, glass, and composites.
