According to our (Global Info Research) latest study, the global Atmospheric Pressure Plasma Machine market size was valued at US\$ 156 million in 2025 and is forecast to a readjusted size of US\$ 227 million by 2032 with a CAGR of 5.6% during review period.

An Atmospheric Pressure Plasma Machine (also known as an AP Plasma system) is an industrial device that generates plasma—a highly reactive, ionized gas—at standard atmospheric pressure. Unlike vacuum plasma systems, it does not require a sealed chamber, allowing it to be integrated directly into automated production lines. It works by using high-voltage, high-frequency energy to ionize a process gas (usually compressed air, oxygen, or nitrogen), creating a 'cold' plasma flame. This flame is used to clean, activate, or etch the surfaces of materials like polymers, metals, and glass to significantly improve their surface energy and adhesion properties for subsequent bonding, printing, or coating processes. In 2025, global Atmospheric Pressure Plasma Machine production reached approximately 15000 units and average price was 10000 usd.

The core manufacturers of global Atmospheric Pressure Plasma System include PVA TePla, Plasmatreat, Diener Electronic, Sekisui Chemical, Tantec and AcXys Technologies, etc. The top five manufacturers account for approximately 36% of the global share.
