The global Atomic Force Microscopy for Industrial market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Atomic Force Microscopy for Industrial is a high-resolution microscope technology widely used in industry to observe and measure the microstructure of material surfaces. Unlike traditional optical microscopes, AFM uses non-optical detection methods to acquire images by sensing the force of surfaces at the nanometer scale. This gives AFM a unique advantage in observing and studying the atomic and molecular level structure of materials.
