Abstracts

The global Atomized Copper Powder (Red Copper Powder) market size is expected to reach \$ 1916 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

In 2025, global production of atomized copper powder (red copper powder) reached 75,000 tons, with an average selling price of US\$18,510 per ton. Atomized copper powder (red copper powder) refers to copper powder material formed by breaking molten copper into tiny droplets through an atomization process and then rapidly cooling and solidifying it. It features controllable particle size and high purity. Its main applications include powder metallurgy structural parts, sintered oil-impregnated bearings, copper paste for terminal/substrate wiring, heat pipe WWI materials, diamond tool metal binders, friction materials, catalysis, chemical processes, and metallurgical operations. The upstream mainly includes high-purity copper raw materials such as copper cathodes/copper ingots; the midstream is the manufacturing process; and the downstream mainly connects to metallurgy, chemical electronics, additive manufacturing, automotive, aerospace, electronics, electrical, and other industrial materials sectors. The gross profit margin is approximately 20%-30%.
