Abstracts

The global Atropine market size is expected to reach \$ 437 million by 2032, rising at a market growth of -1.7% CAGR during the forecast period (2026-2032).

Atropine is a medication to treat certain types of nerve agent and pesticide poisonings as well as some types of slow heart rate and to decrease saliva production during surgery. It is typically given intravenously or by injection into a muscle. Eye drops are also available which are used to treat uveitis and early amblyopia. The intravenous solution usually begins working within a minute and lasts half an hour to an hour. Large doses may be required to treat some poisonings. Common side effects include a dry mouth, large pupils, urinary retention, constipation, and a fast heart rate. It should generally not be used in people with angle closure glaucoma. While there is no evidence that its use during pregnancy causes birth defects, it has not been well studied. It is likely safe during breastfeeding. It is an antimuscarinic (a type of anticholinergic) that works by inhibiting the parasympathetic nervous system. Atropine occurs naturally in a number of plants of the nightshade family including deadly nightshade, Jimson weed, and mandrake. It was first isolated in 1833. It is on the World Health Organization's List of Essential Medicines, the most effective and safe medicines needed in a health system. It is available as a generic medication and is not very expensive.

Global Atropine key players include C?PHARMA, RESONANCE LABORATORIES, ROLABO OUTSOURCING, CR Double-Crane, Katsura Chemical, etc. Global top five manufacturers hold a share about 35%. China, Europe and North America is the largest market, each with a share about 25%, followed by Japan, with a share about 15 percent. In terms of product, Injection is the largest segment, with a share about 80%. And in terms of application, the largest application is Gastrointestinal, followed by

Ophthalmology, etc.
