According to our (Global Info Research) latest study, the global ATSC 3.0 Devices market size was valued at USD 3266.8 million in 2023 and is forecast to a readjusted size of USD 21130 million by 2030 with a CAGR of 30.6% during review period.

ATSC 3.0 is a major version of the ATSC standards for television broadcasting created by the Advanced Television Systems Committee (ATSC). ATSC 3.0 comprises around 20 standards covering different aspects of the system and in total will have over 1,000 pages of documentation. The standards are designed to offer support for newer technologies, including HEVC for video channels of up to 2160p 4K resolution at 120 frames per second, wide color gamut, high dynamic range, Dolby AC-4 and MPEG-H 3D Audio, datacasting capabilities, and more robust mobile television support. The capabilities have also been foreseen as a way to enable targeted advertising and finer public alerting. ATSC 3.0 is a major upgrade for antenna TV, designed to allow for 4K resolution and even a major sound upgrade to broadcast TV. The switch could be as significant as the transition from analog broadcasts to digital HD - except this time it's going to be a whole lot easier. ATSC 3.0 was initially launched in 2017 in South Korea, mainly in preparation for the 2018 Winter Olympics.
