Audio Amplifiers are referred to in this report as audio power amplifier IC. Audio amplifier is mainly used in the audio signal amplification of multimedia playback equipment. Its function is to amplify the weak signal from the audio source or the output of the pre-amplifier, and drive the playback device to emit sound. Audio amplifier is the core component of multimedia playback equipment, which determines the sound quality and working efficiency of the playback equipment. With the development of audio power amplifier technology, audio power amplifier chip gradually evolved from analog chip to digital and analog mixed signal chip, through the algorithm of intelligent optimization of audio output, further improve the sound quality and effect, while providing protection to the chip and equipment.

The main downstream application markets of audio amplifier chips include mobile phones, audio, vehicle, wearable devices, computer equipment, smart home and other fields. As the demand for downstream applications expands, the global audio power amplifier market will continue to expand. Among them, audio power amplifier chips used in smartphones and other mobile devices account for the largest proportion, accounting for about 28% of the entire downstream market.

At present, the world's major manufacturers include Electronic Circuits, Texas Instruments, ON Semiconductor, NXP Semiconductor and ADI, etc., top 3 major manufacturers accounting for more than 48%, and the market is mainly occupied by
