According to our (Global Info Research) latest study, the global Argon market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Argon has the potential of narcotic and protective properties and has proved beneficial for medical purposes. Several studies indicate that the argon gas has the ability to display narcotic effects at hyperbaric pressures of more than 10 atmospheres and is a potential neuroprotective agent.

Argon has gained huge popularity in gas chromatography. Argon plasma is the most prevalent source of ions and is very efficient in plasma generation. Argon has wide acceptance in electrosurgery, where the argon plasma coagulation is used to induce superficial thermal effects on tissues in a non-contact manner. Tissue devitalization, hemostasis, and tissue reduction are the major application fields of argon. The argon plasma coagulation is applied in most surgical areas including urology, general and visceral surgery, gynecology, gastroenterological, bronchological endoscopy, and ear, nose, and throat.
