To address the issues of inaccurate subjective judgment of the operating status of acoustic and optical signaling equipment, lack of quantitative testing methods, and difficulty in ensuring the reliability of early warnings, acoustic and optical signaling equipment testing services have emerged. Since the early 21st century, with the gradual improvement of relevant testing technologies and standards, the fields of industrial safety and public early warning have seen significant development. Currently, acoustic and optical signaling equipment testing services have evolved into a comprehensive service encompassing precise sound pressure level measurement, quantitative illuminance detection, flash frequency calibration, response time testing, and integrated verification of linkage systems. These services are widely used in industrial production alarms, fire emergency evacuation, rail transit warnings, public safety early warnings, and building intelligentization acceptance, providing professional technical services that objectively assess equipment performance, ensure effective transmission of early warning information, and guarantee the reliability of emergency response.
