According to our (Global Info Research) latest study, the global Augmented Reality (AR) Navigation market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Augmented Reality (AR) Navigation generates a virtual 3D navigation guidance model by combining the real images captured by the camera in real time, map navigation guidance information, and scene targets such as vehicles, roads, and pedestrians identified by visual AI, and integrates these virtual information onto the real images, thereby creating a more intuitive navigation experience that is closer to the user's real vision. AR navigation is an innovative navigation method that integrates virtual navigation information with real road scenes, and has the advantages of being intuitive, safe, and convenient. With the continuous development of technology, AR navigation will be applied and promoted in more fields.
