According to our (Global Info Research) latest study, the global Austempered Ductile Iron (ADI) market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Austempered Ductile Iron (ADI) is a type of ductile iron that has been subjected to a specialized heat treatment process called austempering. This process involves heating the iron to a temperature where its structure transforms into austenite, then rapidly cooling it to an intermediate temperature range and holding it there until the desired microstructure is achieved. The result is a material that combines high strength, toughness, and wear resistance with good fatigue properties. ADI is used in various applications where these properties are critical, such as in automotive components, heavy machinery, agricultural equipment, and railway parts. Its superior mechanical properties and cost-effectiveness make ADI a popular choice in industries seeking durable and high-performance materials.
