A plate beveler, or plate bevelling machine, is a rotary edge cutting machine that utilizes carbide inserts or similar cutting/grinding elements to produce a beveled, angled or radius edge. The most common application for metal beveling is weldment preparation.

As the market grows, trends are changing; the use of rapid mechanical chamfering is a new trend in the development of the beveling machine market. It overcomes the shortcomings of existing mechanical and electric tools and has the advantages of convenience, speed and accuracy. Surge in demand and the emergence of several leading players are key factors expected to ensure the growth of the North American beveling machine market in the coming years. More workshops are being commissioned to integrate pipe cutting and beveling machines to boost the growth of the beveling machine market. Low-cost, safe options and growing demand for sheet beveling in different application areas are expected to ensure market expansion during the forecast period.
