Abstracts

The global Auto Refractometer and Lensmeter market size is expected to reach \$ 186 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

An auto refractometer is an ophthalmic diagnostic instrument used to automatically measure a person's refractive error of the eyes, including myopia, hyperopia, and astigmatism. It provides fast, objective measurements by analyzing how light changes as it enters and reflects from the eye, and is commonly used in eye clinics, hospitals, and optical shops as a preliminary step before subjective refraction.

A lensmeter is an optical instrument used to measure the optical properties of eyeglass lenses, such as lens power, axis, prism, and optical center. It is essential for verifying and inspecting finished spectacle lenses during manufacturing, dispensing, and fitting, and is widely used in optical stores, laboratories, and eye care facilities.

In 2025, global Auto Refractometer and Lensmeter production reached approximately 30 k units with an average global market price of around US\$ 4,000 per unit. The production capacity for Auto Refractometer and Lensmeter in 2025 was approximately 35 k units. The typical gross profit margin for Auto Refractometer and Lensmeter is between 20% and 40%.

The auto refractometer and lensmeter market is driven by the growing demand for vision care services, increasing prevalence of myopia and other refractive errors, and the modernization of optical clinics and hospitals. Auto refractometers are widely used for fast and accurate objective refraction, while lensmeters are essential for verifying eyeglass lens power and quality. Technological trends such as digitalization, automation, and connectivity are improving measurement accuracy and workflow efficiency, supporting steady market growth in both developed and emerging regions. This report studies the global Auto Refractometer and Lensmeter production, demand, key manufacturers, and key regions.
