According to our (Global Info Research) latest study, the global Auto Rotary Polishers market size was valued at USD 2793.6 million in 2023 and is forecast to a readjusted size of USD 3629.2 million by 2030 with a CAGR of 3.8% during review period.

This report focus on Auto Rotary Polishers market. The rotary is often considered to be the adversary of the Dual Action polisher. It is a polishing machine that uses only 1 type of motion to create a polishing effect. It is very good at cutting, works quicker then a DA, but also requires much more experience and knowledge to use properly. Rotary Polishers are very straightforward – the head spins on a single axis in a regular circular motion. This causes heat and friction to build up allowing the user to perform paint correction processes. Rotary Polishers will remove marks in paintwork that dual action polishers cannot.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
