Abstracts

The global Auto Scaling market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Auto Scaling (AS for short) service provides customers with cloud server resource pools that can be scaled on demand to help customers flexibly respond to short-term high-concurrency scenarios such as events, promotions, and flash sales.

When business needs increase, AS will automatically expand cloud server instances or increase computing specifications for customers to ensure business capabilities; when business needs decline, AS will automatically reduce cloud server instances or reduce computing specifications for customers to save resource costs. Intelligent and flexible scaling services enable customers to maintain an appropriate amount of resources and provide healthy services no matter whether their business is in a fluctuating period or a stable period.
