Abstracts

An auto-steer system for agriculture is a precision farming technology designed to automate steering tasks in agricultural machinery, such as tractors and combines, during field operations. It utilizes GPS (Global Positioning System) and other positioning technologies to accurately guide the vehicle along predefined paths, reducing overlaps and gaps in field coverage. By maintaining consistent and precise trajectories, auto-steer systems optimize the efficiency of farming operations, minimize input waste, and enhance overall productivity. These systems often integrate with other precision agriculture technologies, such as variable rate application systems and yield monitoring, to enable data-driven decision-making and improve farm management practices.
