Abstracts

Autoclaved Aerated Concrete (AAC) equipment refers to machinery and systems used in the production of AAC, a lightweight and high-insulating building material. The equipment typically includes a mixing and casting unit for preparing the AAC slurry, molds for shaping the material, autoclaves for the curing process, and cutting equipment for shaping the finished blocks or panels. AAC is made from sand, cement, lime, and aluminum powder, which undergoes a chemical reaction during autoclaving, resulting in a porous and lightweight structure. The equipment involved in AAC production ensures precise mixing, casting, curing, and cutting to produce durable, energy-efficient, and environmentally friendly building components used in residential, commercial, and industrial construction projects.

According to our (Global Info Research) latest study, the global Autoclaved Aerated Concrete Equipment market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

Whether the autoclaved aerated concrete equipment can operate continuously and stably will directly affect the qualification rate and quality of downstream autoclaved aerated concrete products. It will also affect the energy consumption and efficiency of the entire production process. Downstream manufacturers are strict in the selection of equipment companies.

Most autoclaved aerated concrete equipment manufacturers with low technical levels are in a highly homogeneous low-end product market with fierce competition and low profit margins. At present, about 30% of enterprises are relatively advanced in technology, while about 70% of enterprises are relatively

backward in technology. The existing autoclaved aerated concrete equipment is still mainly mechanized equipment, and automated equipment only accounts for 20% of the total production lines. Among autoclaved aerated concrete enterprises, the higher the technical level of the equipment, the better the output and capacity will be, which reflects the relationship between technical level and production efficiency and shows the development direction of autoclaved aerated concrete equipment.
