## Abstracts

'Autocrane means a lifting device incorporating a cable suspended latticed boom or hydraulic telescopic boom designed to be moved between operating locations by transport over the road.

The most basic type of mobile crane consists of a steel truss or telescopic boom mounted on a mobile platform, which may be wheeled (including 'truck' carriers). The boom is hinged at the bottom, and can be raised and lowered by cables or by hydraulic cylinders.

In this report, we mention the autocrane including rough-terrain crane, all-terrain crane and truck crane, do not include crawler crane.'
