## Abstracts

The global Autofocus System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Autofocus systems obtain focus through feedback from range-finding or other sensing methods. They measure a parameter, adjust the distance between the lens and the object's surface, and then measure the autofocusing (AF) parameter again. The process is repeated until the object is in focus according to the specified autofocusing parameter. Shallow depths of field, poor contrast in the sample, and low illumination can result in low-quality autofocusing. Dynamic focusing autofocus systems are used to continuously maintain focus, or for tracking a moving target. Some specialized autofocus systems use a laser to project a series of dots or lines onto the sample for autofocusing.

This report studies the global Autofocus System production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Autofocus System, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
