Abstracts

The global Autoimmunity Reagents market size is expected to reach \$ 1163 million by 2032, rising at a market growth of 8.8% CAGR during the forecast period (2026-2032).

Autoimmunity Reagents are in-vitro diagnostic reagent kits and assay consumables used to detect autoantibodies and immune markers associated with autoimmune diseases. They mainly include ELISA, IFA, immunoblot/line blot, CLIA and multiplex immunoassay reagents, and are used for screening, differential diagnosis, disease monitoring and follow-up of systemic and organ-specific autoimmune diseases such as rheumatoid arthritis, systemic lupus erythematosus, celiac disease, autoimmune thyroid disease, vasculitis, antiphospholipid syndrome and autoimmune liver disease. In 2025, global Autoimmunity Reagents production reached approximately 28.12 Million Unit.

The market is driven by the rising clinical burden and better recognition of autoimmune diseases. Autoimmune diseases are often chronic, difficult to diagnose at an early stage, and frequently require repeated testing for screening, confirmation, monitoring and treatment follow-up. This creates continuous demand for ANA, ENA, dsDNA, ANCA, antiphospholipid, rheumatoid arthritis, celiac disease, autoimmune thyroid disease and autoimmune liver disease reagent panels. Hospitals and reference laboratories increasingly prefer reagent systems that can provide standardized results, broad disease coverage and compatibility with automated laboratory workflows.

A second important driver is the shift from manual or semi-manual testing to automated and multiplexed autoimmune diagnostics. ELISA and IFA remain widely used, but CLIA, automated IFA reading, line immunoassay and multiplex immunoassay platforms are growing because they reduce labor intensity, improve reproducibility and support higher testing volumes. Large hospital laboratories, third-party testing centers and regional

reference laboratories are especially important demand sources, since they need higher throughput and broader autoantibody menus.

China and other Asia-Pacific markets are becoming more important because autoimmune disease awareness, specialist rheumatology capacity, hospital testing volumes and domestic IVD manufacturing capability are improving at the same time. Chinese companies such as HOB Biotech, YHLO, Kangrun and Shanghai Kexin are expanding the local supply base, while global companies continue to lead high-end platforms, comprehensive assay menus and international regulatory coverage.

This report studies the global Autoimmunity Reagents production, demand, key manufacturers, and key regions.
