Abstracts

Automated Border Control systems (ABC) or eGates are automated self-service barriers which use the data stored in the chip in biometric passports to verify the user's identity. Travellers undergo biometric verification using face, fingerprint, iris recognition or a combination of modalities. After the identification process is complete, a physical barrier such as a gate or turnstile opens to permit passage.

Scope of the Report:

Of all the major applications of ABC, airport holds the largest share of the ABC market. The demand for ABC across airports is growing owing to the increasing passenger traffic across the globe. The increasing passenger traffic at airports is mainly because of the increasing travel and tourism activities and economic development across the globe. Among solution types, the ABC e-gate held a larger share of the automated border control market. This growth can be attributed to the increasing need for automation and increasing passenger traffic. ABC e-gates can process maximum number of passengers while maintaining security.
APAC is expected to be the fastest-growing market for ABC between 2018 and 2025. The government support to deploy ABC to enhance security and traveler convenience makes the ABC market attractive in the APAC region.
