An Automated Chemiluminescence Analyzer System is a fully integrated in vitro diagnostic platform that performs immunoassays by detecting light emitted from chemiluminescent reactions. The system automatically completes sample loading, reagent dispensing, incubation, washing, signal detection and result reporting with high sensitivity and throughput. It is widely used for clinical diagnosis, disease screening, hormone testing, infectious disease detection and tumor marker analysis. The product excludes standalone reagents, consumables and laboratory information systems.

The upstream industry includes optical detectors, precision mechanics, electronic components, reagents, consumables and software. Midstream covers analyzer manufacturing, system integration, software development, calibration and quality verification. Downstream applications include hospitals, independent clinical laboratories, diagnostic centers and public health institutions. Market growth is driven by increasing diagnostic demand, laboratory automation and expanding immunodiagnostic testing.
