An Automated Cold Filter Plugging Point (CFPP) Tester is a laboratory instrument used to determine the lowest temperature at which diesel fuel and other middle distillate fuels will pass through a standardized filtration device within a specified time when cooled under standardized conditions. This is a critical property for fuels intended for use in cold climates, as it ensures that the fuel can be pumped and delivered even when the ambient temperature is low.By automating the testing process, tester provides accurate, repeatable, and efficient measurement of the Cold Filter Plugging Point, supporting fuel quality control, product development, regulatory compliance, and operational planning. This ensures that fuels remain operable and do not cause filter blockages in cold climates, thereby enhancing the reliability of diesel engines and other equipment using these fuels.
