According to our (Global Info Research) latest study, the global Automated Fiber Placement System for Wind Blade market size was valued at US\$ 1132 million in 2025 and is forecast to a readjusted size of US\$ 2277 million by 2032 with a CAGR of 10.7% during review period.

Automated Fiber Placement System for Wind Blade is an advanced composite manufacturing system purpose-built for wind turbine blade production, enabling continuous and highly accurate automated placement of fiber tows along ultra-long blade geometries and key load-bearing regions. Through multi-axis coordinated control and precise path planning, it ensures stable fiber orientation and uniform laminate quality across spar caps, shear webs, and shell structures. Its advantages include high layup accuracy, high material utilization, and strong structural consistency, effectively supporting the trend toward larger blades and industrialized mass production. In 2025, the industry's capacity utilization rate was about 50%, and the average gross margin was approximately 35%. In 2025, production reached 500 units at an average price of US\$2.2 million per unit. Upstream, the supply chain mainly involves high-precision servo motors and linear guide systems, with representative suppliers including Siemens, Bosch Rexroth, THK, and HIWIN. The midstream focuses on system integration, motion control tuning, placement head design, and process optimization, which together determine system accuracy and operational stability. Downstream applications are concentrated in offshore wind power and onshore wind power, with representative customers including Vestas, Siemens Gamesa, GE Vernova, Goldwind, and MingYang Smart Energy.
