According to our (Global Info Research) latest study, the global Automated Guided Vehicles and Autonomous Mobile Robots market size was valued at US\$ 13510 million in 2024 and is forecast to a readjusted size of USD 30900 million by 2031 with a CAGR of 12.7% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

An Automated Guided Vehicle (AGV) is an intelligent transport vehicle equipped with automatic guidance devices that can travel along a prescribed path. Its body is equipped with programming and parking selection devices, safety protection devices, and various material handling functions. Powered by batteries, it typically relies on automatic guidance devices such as magnetic strips, tracks, or lasers to travel along a planned route. Multiple AGVs, along with control computers, navigation equipment, charging equipment, and surrounding auxiliary equipment, can form an AGV system.

An Autonomous Mobile Robot (AMR) is a robot with understanding capabilities and the ability to move independently within its environment. It is generally wheeled or humanoid and carries various sensors. Through programming, it achieves autonomous movement and can use intelligent algorithms to analyze data perceived by multimodal sensors (such as lidar, cameras, ultrasonic radars, etc.) to form an understanding of the on-site environment. Based on this understanding, it autonomously selects the most effective method and path to execute tasks.
