The global Automated Harvesting Systems market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Automated harvesting systems are advanced technologies used to automate the process of harvesting crops in agriculture. These systems use various sensors, robotics, and artificial intelligence (AI) to identify and selectively harvest crops with high precision and efficiency.

Automated harvesting systems are designed to overcome some of the limitations of manual harvesting, such as labor shortages, high labor costs, and limitations in the availability of skilled labor. These systems can also improve crop quality and reduce waste by selectively harvesting only the crops that are ripe and ready for harvest.
