The global Automated IC Burning Equipment market size is expected to reach \$ 72 million by 2029, rising at a market growth of 9.1% CAGR during the forecast period (2023-2029).

The increasing popularity of programmable ICs has brought rapid changes to the ecosystem of IC programmers. In addition, China will become the world's manufacturing factory and must be a super war zone. The huge amount of programming of two major ICs, MCU and Flash, is a key point in the decisive battle. Due to the wide variety of programmable ICs, the programming methods and equipment vary greatly and are difficult to master. In addition, the demand for programming is generally short-term and urgent, so the professional programming OEM industry was born. The burning service is safe and accurate first. It is most popular if we can cooperate with customers nearby for a long time. Although labor is cheap in China, times are changing, and the human sea tactic will eventually lose to the efficiency and reliability of high technology. Shenzhen and Suzhou, where the electronics manufacturing industry is concentrated, are areas worth observing.

Automated IC burning equipment is an automated equipment used for chip burning. IC programming (In-Circuit Programming) refers to the process of storing program code or data into non-volatile memory (such as flash memory) in an integrated circuit (IC).
