## Abstracts

According to our (Global Info Research) latest study, the global Automated IC Programmer market size was valued at USD 39 million in 2022 and is forecast to a readjusted size of USD 72 million by 2029 with a CAGR of 9.1% during review period.

Automated IC burning equipment is an automated equipment used for chip burning. IC programming (In-Circuit Programming) refers to the process of storing program code or data into non-volatile memory (such as flash memory) in an integrated circuit (IC).

The increasing popularity of programmable ICs has brought rapid changes to the ecosystem of IC programmers. In addition, China will become the world's manufacturing factory and must be a super war zone. The huge amount of programming of two major ICs, MCU and Flash, is a key point in the decisive battle. Due to the wide variety of programmable ICs, the programming methods and equipment vary greatly and are difficult to master. In addition, the demand for programming is generally short-term and urgent, so the professional programming OEM industry was born. The burning service is safe and accurate first. It is most popular if we can cooperate with customers nearby for a long time. Although labor is cheap in China, times are changing, and the human sea tactic will eventually lose to the efficiency and reliability of high technology. Shenzhen and Suzhou, where the electronics manufacturing industry is concentrated, are areas worth observing.
